Customer Support Ticket Priority Prediction and Automat...

Information Technology Group

Customer support teams receive a large number of tickets daily, but prioritization and assignment are often manual. This leads to delays in resolving critical issues and poor customer satisfaction.

Phase 1: Requirement Analysis & Planning
Epic
Complexity: Easy
Duration: 1h 59m
Description
Analyze business requirements, define project scope, gather user needs, and plan the system architecture for the Customer Support Ticket Priority Prediction and Automated Assignment System.
Objective
Understand how customer support teams handle large volumes of tickets and the challenges in prioritization and assignment. The goal is to build a Salesforce-based solution using Agentforce to automate ticket prioritization, assignment, and improve response time and customer satisfaction.
Approach
Gather requirements from support agents, managers, and customers to understand ticket handling challenges.
Study how tickets are currently created, prioritized, and assigned manually.
Identify issues like delayed responses, incorrect prioritization, and uneven workload distribution.
Research using ChatGPT, Google, and Salesforce Trailhead to design an AI-powered ticket management system.
